INTRODUCING

RESPONDER

Spill Responder Training

A spill in the workplace can cause risk to human health, disrupt business operations, cause impact to property or the environment and can result in fines and reputational damage.

Having trained spill responders on site to carry out emergency spill containment can help mitigate all of these risks.

We believe you learn best by doing, so all of our Spill Response courses have a significant hands-on element to them. Our spill training courses are delivered by current practitioners of spillage response. Their experience and knowledge bring your training session to life.

OUR CREDENTIALS

With a working relationship that spans over 20 years, Responder represents a joint training venture between Darcy Spillcare and Compass Environmental Consultancy.

Both companies are leaders in their respective fields. Darcy are suppliers and manufacturers of spill response equipment & environment protection solutions. Compass are ISAS Accredited Spill Managers & Consultants managing the response to spillage incidents on a daily basis!

By combining our expertise, **Responder** is a compelling offering to those looking to develop in-house spill response capabilities to protect the health & safety of their employees and to protect the environment from spillages.

Darcy spillcare are market leaders in the supply of spill clean-up and recovery materials.

For over 50 years Darcy have been able to provide their innovative solutions to businesses world-wide and help protect these companies from causing environmental pollution.

Managing Director, Richard Proctor, is a past Chairman of UKSpill - the trade association for companies, organisations and individuals involved in spill management and the manufacture of spill response products.

When it comes to delivering spill response training, Compass Environmental Consultancy are the experts.

Compass are a key supplier of training to professional spill responders, the Fire & Rescue Service and in-house spill teams.

Managing Director, Stewart Ower, is the current Chairman of the International Spill Accreditation scheme - the organisation that accredits professional spill responders.

Spill

FIRST RESPONDER

Our Spill First Responder training course serves as a comprehensive introduction to the principles of spill response. This course is aimed at spill response operatives and companies who have the potential to cause a spill.

Our 4 hour ISAS Approved course covers spill response to spillages on hardstandings (internal and external surfaces) and within drainage systems, bunds and interceptors.

Our on-site courses include a 1 hour practical exercise to familiarise delegates with the equipment and techniques that can be deployed in a spillage incident. For those taking part online, this session is replaced with a video segment that covers off the same topics.

“An informative & professional course keeping us all interested with real-life situations & examples. Great knowledge and trainer answered all questions thrown at him.” - Course Delegate

The nature of this course makes it a popular choice for any company who has the potential to cause a spillage and wishes to develop an in-house spill response capability.

We have delivered this course to car manufacturers, breweries, construction companies and national retailers to name a few! It also provides a solid foundation for professional spill response operatives.

Delegates receive a certificate which is valid for 2 years.

Course Content

- Understanding Spills
- The Law & Spillages
- Causes of Spills
- Behaviour & Effects of Different Pollutants
- Spill Response Planning
- Responding to a Spill
- Spill Response Product Selection & Deployment Techniques
- Practical Exercise
- Train the Trainer option
- Site Walkover (Train the Trainer only)

At your premises or online

4 hours

1-12 delegates

ADVANCED SPILL RESPONDER

Our Advanced Spill Responder Training Course is aimed at professional spill response personnel and those seeking more in-depth knowledge and experience in responding to spills.

Our 1 day ISAS Approved course covers Spill Response to spillages on hardstandings and within drainage systems and spillages which have entered inland watercourses.

The training is delivered by Stewart Ower, Chairman of the International Spill Accreditation Scheme and takes place at the Fire Service College, Moreton-in-Marsh. The combination of trainer knowledge and expertise combined with the World Class training facilities at the College makes for a memorable and valuable training experience.

“Delivered extremely well and easily absorbed (no pun!) Great location and facilities.” - Course Delegate

The classroom element of the course focuses on real spill scenarios, spill equipment selection and deployment techniques to ensure a safe, proportionate and effective response. The practical session takes place out on the Fire Ground where delegates will put all they have learnt into practice dealing with spillages on hardstandings and within a watercourse.

The end of course assessment will capture learning outcomes from the day and all successful delegates will receive a training certificate valid for 2 years.

Course Content

- Understanding Spillages
- The Law
- Stakeholder Responsibilities
- Pollutant-Pathway-Receptor
- Responding to Spills on Hardstandings, in drains, bunds and interceptors
- Responding to Spills Impacting Freshwater
- Spill Response Product Selection & Deployment Techniques
- Two Practical Scenarios
- End of course assessment

TACTICAL SPILL RESPONDER

Our Tactical Spill Responder training course is the most technical course in our spill responder development programme. We believe that a tactical approach to a spill sees the best possible outcome whilst also recognising responder capability and most crucially, safety.

Our 1 day course delivered by Stewart Ower, Chairman of the International Spill Accreditation Scheme, builds upon delegates' experience and knowledge of spill response, actively challenging them to develop and learn the mindset of a Tactical Responder.

Scenario driven, this course pits delegates against 4 complex spill scenarios, each introducing our delegates to a different polluting material, bringing its own hazards to both the environment and spill responders. The day will challenge delegates mentally and practically, literally starting with a bang during a Hazardous Materials awareness session in the laboratory with Kevin Miller!

The course has been specifically designed to take those who have already completed our Advanced Spill Responder course and develop them into Tactical Responders.

By the end of this course the delegates will have been challenged to recognise the hazards of responding to a spill and they will also have gained insight into a range of pollutants and will be able to formulate and execute a tactical response, or make the decision not to respond. This is what we call the Tactical mind-set.

The end of course assessment will capture learning outcomes from the day and all successful delegates will receive a training certificate valid for 2 years.

Course Content

- Hazmat Hazard Awareness
 - Recognising Hazards
 - Laboratory Session
- Safety Data Sheet Interpretation
- PPE Selection
- 4 scenarios taken from initial reporting to executing safe response
- Developing the mindset of a Tactical Spill Responder
- End of course assessment
